

1 PREPARE CORRECTLY!

Day zero is just as important as day 5! Make sure to exfoliate 24 hours prior to your session. Don't exfoliate right before hand - your skin needs the amino acids it naturally builds to create a deep, dark tan. Scrubbing these off right before your session will lessen your tan. Wear dark, loose-fitting clothing and flip flops to your session. No makeup, lotion, or deodorant, please! Immediately before your sunless session, be sure to use an eXmitt (available in store) to gently exfoliate, moisturize skin, & balance pH.

2 GREATNESS CAN'T BE RUSHED

Your spray tan needs to sit on your skin for 18-24 hours before your first warm water rinse - unless you're using our One Hour Rapid Tan solution. If so, let your tan sit for 1 hour for a light tan and no more than 3 hours for a dark tan (waiting longer will adversely affect your color). Regardless of your solution, a warm water rinse is all that should happen for your first shower. Don't rough that tan up with soaps, washcloths, or loofahs. Gently use your hands to rid your skin of any excess cosmetic bronzer - and don't worry! Your tan isn't washing down the drain, just the cosmetic bronzer. If using the Rapid Tan solution, your tan will continue to darken for up to 24 hours.
